Object Frieze in the Burial Chamber of the Late Period Shaft Tomb of Menekhibnekau at Abusir
Object friezes, containing a broad range of different items, such as crowns, staves, royal insignia, clothing, jewellery, weapons, ritual objects, amulets, tools, etc., appear rather frequently on the sides of wooden coffins or, much rarely, on the sides of the burial chambers dating especially from the later part of the Old Kingdom until the end of the Middle Kingdom. Less often, they are attested during the New Kingdom and even later. In some cases, they are only painted; otherwise their names are added as well. Sometimes, more items of one and the same kind are mentioned or a digit is added, clearly intending to enhance their magical powers for the deceased.

Although the object frieze is, exceptionally, attested later, namely during the New Kingdom in scenes of the funeral outfit or the deceased overseeing it (e.g. TT 79: Mencheperre-seneb) and even the Late Period (TT 33: Padiamenopet), its use in the tombs of such a date seemed to have been limited to the Theban region so far. Recently, however, such friezes have also been found in the large Late Period shaft tombs at Abusir, dated to the very end of the Twenty-sixth or even the beginning of the Twenty-seventh Dynasty, namely those of Iufaa and Menekhibnekau.

In the tomb of Iufaa, several short object friezes (containing up to ten items as a maximum) appear on the outer side of the lid of the anthropoid inner sarcophagus, in the head region, as well as on the northern and southern sides of the depression inside the outer sarcophagus (close to its western, i.e. foot-end).

In the burial chamber of Menekhibnekau, a large, single object frieze appears in the upper part of the western wall. Together with a long htp-di-nswt formula containing also the titles of Menekhibnekau that is written in a single line just above it, it takes the entire length of the western (i.e. the longer) side of the burial chamber. Above the htp-di-nswt formula, the personifications of the night hours appear as a row of twelve women (always with their names written above their heads); the kneeling owner of the tomb is depicted in front of them.

*This study has been written within the Programme for the Development of Fields of Study at Charles University, No. P14: ‘Archaeology of non-European regions’, sub-programme: ‘Research of ancient Egyptian civilisation. Cultural and political adaptation of the North African civilisations in ancient history (5,000 BC–1,000 AD)’.

4 On the archaeological work in this tomb, see now L. BAREŠ, K. SMOLÁRIKOVÁ, The shaft tomb of Iufaa I: Archaeology, Abusir XVII, Prague 2008 [= Iufaa I]. Texts and scenes from the magnificent relief decoration of Iufaa’s burial chamber (including the object friezes) will be published in the second volume, now under preparation.  
5 On the archaeological work in this tomb, see now L. BAREŠ, K. SMOLÁRIKOVÁ, The shaft tomb of Menekhibnekau I: Archaeology, Abusir XXV, Prague 2011 [= Menekhibnekau I]. Texts and scene from the relief decoration of that tomb will appear in the second volume, now under preparation.  
6 On the titles of Menekhibnekau, see BAREŠ, SMOLÁRIKOVÁ, Menekhibnekau I, pp. 74–79.  
The object frieze contains altogether 47 items, usually arranged in short columns. Above, their names are listed, each of them separated with short vertical dividing lines. Below, the items or their symbols are depicted, without any dividing lines but arranged into several groups on low rectangular stands. The object frieze starts in the north-western corner and is thus arranged in the direction from the head to the feet of the deceased. These objects are:

1) ‘afnt ‘Afnet Headdress’,8 with a depiction of it put on a low stand below – the depictions below the items one to nine are placed on one and the same low rectangular stand (representing most probably a box for storing those items);
2) nms ‘Nemes Headdress’,9 with its depiction put on a low rectangular stand below;
3) iʾrt ‘Uraeus’,10 with a depiction of a raised cobra put on a low rectangular stand below;
4) ʿrt ‘Eternity’,11 below, the same cobra with an additional sign ʾ is depicted, put on a low rectangular stand;
5) ssāʾr ‘Uraeus’,12 with the depiction of a raised cobra put on a low rectangular stand below;
6) wrt ḫkw ‘Great of Magic (i.e. the Red Crown),13 with the depiction of a raised cobra put on a low rectangular stand below;
7) ṣr(k)t ‘Sereq (Serpent)’,14 with the depiction of a raised cobra put on a low rectangular stand below;
8) ntr ‘nh ‘Living God’,15 with the depiction of a raised cobra put on a low rectangular stand below;
9) bd(?) ‘Natron’,16 with the depiction of an incense burner put on a low rectangular stand below;

47) *r(w)d* ‘Bow-string’, with the depiction of two bow-strings standing on a low stand below.

The reasons for the presence or absence of the object friezes in the decoration of the individual Late Period tombs at Abusir (or such tombs in general) are far from certain. Some time ago, a connection between the object frieze and the offering list (as part of the tomb’s decoration) has been suggested, namely that the friezes precede the offering lists.\(^{57}\) The fact that no offering list seems to have existed in the subterranean parts of the tomb of Menekhibneka (in the burial chamber proper or on any part of the double sarcophagus) might corroborate such an assumption. Theoretically, however, a short offering list (and/or another object frieze as well) might have existed on the sides of the inner sarcophagus that is still firmly embedded inside the outer one, large areas of its surface thus being inaccessible, perhaps forever. At the same time, numerous fragments of an offering list (or even offering lists?) had been unearthed above the ground at this spot. Most probably, therefore, an offering list/offering lists must have been present in the superstructure of that tomb that, unfortunately, had been almost completely destroyed by later stone quarrying.\(^{58}\) On the other hand, most of the New Kingdom and Late Period examples of the object frieze formed part of the scene of the deceased overseeing his funeral outfit, i.e. they appear in a context rather different from the situation in the Abusir shaft tombs.

In the tomb of Iufaa, two large (and several minor) offering lists are present, in addition to the object friezes mentioned above. A large list, in a shape usual for other large Late Period shaft tombs of the same kind, decorated the southern side of the burial chamber and was thus situated to the left of the tomb owner’s mummy. Another large and detailed offering list, accompanied by the traditional scene of the tomb owner seated in front of a table with offerings, decorated the outer side of the inner sarcophagus’s chest on its foot end. A number of representations of offerings, offering tables, etc. appear also on the inner sides and bottom of the chest.

In the remaining large shaft tombs at Abusir, namely those of Udjahorresnet\(^{59}\) and Padihor,\(^{60}\) no traces of any object frieze had been found. In both tombs, however, a rudimentary offering list exists, so that, perhaps, there was no need for the tomb owner (or for the people who had prepared his tomb) to add an object frieze there. Theoretically, of course, an object frieze (quite short, in this case) might have been included in the decoration of the inner sarcophagus of Udjahorresnet in its parts now inaccessible, or might have appeared on the presupposed wooden coffin of Padihor, destroyed by the tomb robbers later on and now

\(^{56}\) Cf. *ibid.*, pp. 211–214. See also a list of amulets from the Saite Period published by Capart, *ZAS* 45, 1908–09, p. 20, No. 57.  
\(^{58}\) Bareš, Smoláříková, Menekhibneka I, pp. 38–41.  
\(^{59}\) Bareš, The shaft tomb of Udjahorresnet at Abusir, *Abusir* IV, Praha 1999 [= The shaft tomb of Udjahorresnet].  
missing. In both those tombs, moreover, the superstructure had been so badly destroyed that a possible existence of any offering list there can be neither proven nor rejected. In the anonymous tomb R 3, almost no traces of any decoration had been found and, most probably, no offering list or object frieze had ever existed here.\(^61\)

In the object friezes mentioned above, several items appear more than once, even in one and the same frieze. So far, no obvious reason for that fact can be given. In the case of Menekhibnekau, especially, the frieze had to cover the entire length of the wall. A possible connection with texts accompanying that frieze in the lower part of the same western wall of the burial chamber cannot be proven. Whether some other imaginable motives, such as personal preferences (of the tomb owner or of the people who had prepared his tomb) or the habits of that time had been present as well, must remain purely hypothetical, more so in view of the very limited evidence.

Generally speaking, the reasons for the presence or absence of an object frieze in the large Late Period shaft tombs at Abusir are as unclear as are, for instance, the reasons for the surprising difference in the orientation of deceased in those burial complexes.\(^62\) Supposedly, all those tombs had been built in about the same time\(^63\) and had belonged to people of roughly the same (or, at least, rather similar) social status\(^64\) that, moreover, seem to have been related to each other.\(^65\) Because of that, the reasons for such clear differences must be looked for elsewhere, perhaps in personal preferences, as well as means (including the ordinary workforce and qualified artists) and time available for the construction of their burial complexes, rather unsatisfying as such an explanation is. Certainly, one may even ask, whether – and if so, to which degree – the owners of the individual tombs actually had the possibility and liberty (and/or had felt an interest in that matter?) to choose and, potentially, also change any of the features mentioned above, or, whether they had been more or less dependent on other decision-makers in this respect. Theoretically, the presence of the object-friezes in the large Late Period shaft tombs might be connected with the archaistic tendencies of that era as well.\(^66\)

\(^{62}\) BAREŠ, SMOLÁRIKOVÁ, Menekhibnekau I, p. 54 with n. 155.

\(^{63}\) Ibid., p. 69.

\(^{64}\) L. BAREŠ, The social status of the owners of the large Late Period shaft tombs, [in:] M. Bárt a, F. Copp ens, J. Krejčí (Eds), Abusir and Saqqara in the Year 2005. Proceedings of the conference held in Prague (June 27–July 5, 2005), Prague 2006, pp. 1–17.

Summing up, our understanding of thoughts and motives that had led the owners and/or the architects of such tombs to choosing (or, on the other hand, to omitting) a certain type or feature of the tomb’s arrangement, the inner decoration of their burial chambers and the individual set of amulets and burial equipment in general is quite limited and much more work should be done in that respect. Without any doubt, such changes must have mirrored deep changes in the religious thought of ancient Egyptians in the course of time, as, e.g., the differences in the position and orientation of deceased clearly show. At the same time, some features – such as the presence or absence of the inner wooden coffin inside the double sarcophagus – had perhaps been in no way connected with the personal preferences or changes in the religious thought of that time and might have simply reflected the means available to the owner of the tomb (including his family) or the degree of the royal favour.

So far, the large Late Period shaft tombs at Abusir have brought more questions than answers. Let us hope that the future excavations will change the balance in favour of the latter.

opinion, the object friezes accompany and, in a way, perhaps also materialize, the rites concerning the burial and the resurrection of the deceased.

67 On this phenomenon, see, e.g., the interesting and thought-inspiring recent discussion of the meaning and use of the so-called magical bricks by H. Franzmeier, Die magischen Ziegel des Neuen Reiches – Material und immaterieller Wert einer Objektgruppe, MDAIK 66, 2010, pp. 93–105 (esp. 93–95). See also the preceding note.

68 J.-Ph. Lauer, La structure de la tombe de Hor à Saqqarah, ASAE 52, 1954, p. 134 n. 2; Bareš, The shaft tomb of Udjahorresnet, p. 22 with n. 12; M. Stammers, The Elite Late Period Egyptian Tombs at Memphis, Oxford 2009, p. 31.

2. Second part of the object frieze in the burial chamber of Menekhibnekau (Phot. M. Frouz).
3. Third part of the object frieze in the burial chamber of Menekhibnekau (Phot. M. Frouz).

4. End of the object frieze in the burial chamber of Menekhibnekau (Phot. M. Ottmar).
